About Us

We provide an industry-leading OEM presence within easy reach of your operation, with quick response and turnaround of equipment regardless of pump make or model. Our experience spans across several complex industries including oil and gas, nuclear and conventional power generation, desalination, & other key markets relevant to our product portfolio.

We offer a comprehensive range of on-site services such as installation, inspection, commissioning, removal, preventative & scheduled maintenance, emergency breakdown service, and full turnkey projects, all designed to deliver optimum pump lifecycle results with minimum downtime. Our highly trained and experienced engineers work to minimize unscheduled shutdowns for customers, while considering all factors associated with the pump duty conditions, age, and demands on the pump system.

Capabilities

Products/Service

- Installation and startup services
- Turnkey services available for repairs
- Full equipment diagnostic services for troubleshooting
- Laser alignment
- Vibration recording and evaluation

Core Competencies

We supply OEM and 3rd party spare parts with OEM-level quality and precision. Our Burlington site offers dedicated reverse engineering capabilities to recreate components with exacting standards. We also provide assembly, basic overhauls, upgrades, packaging, extended storage, pump system testing, and technical services.

We deliver fast, responsive service for OEM and non-OEM pumps, exceeding API and OEM standards. Our capabilities include RCA, robust inspections, field service, re-rates, retrofits, duplicate pumps, and full lifecycle support – from commissioning & audits to re-engineering, remanufacture, and service agreements. Valve repair will be available shortly in Burlington.

- Horizontal Boring Mill
- VTLs up to 52"
- Hydraulic Presses
- Key Seater, Balance Machine
- Bench Grinder
- Bridgeport Mills
- 25 ton crane capability
- Multi Axis CNC Machines.

CASE STUDY

We received three water injection pumps for repair. We completed a quick turnaround and repair on the three pumps and a comprehensive repair to a casing defect with engineering FEA.

The customer requested the repair of three cartridges and a barrel, which required extensive work to be completed within a two-month timeline. This project was successfully delivered through the combined efforts of multiple departments, including Service, Quality, Engineering, Machine Shop, and Test.

The work completed on the pumps extended their lifetime by 10 years, while meeting the customer's critical timeline allowed them to resume scheduled production without delay.
